Hi Ms. Quinn,

Citizens Campaign for the Environment submitted written comments on the draft Dredge Material Management Plan for the Long Island Sound earlier this week, and has already submitted 5500+ signatures from NY and CT residents opposing continued dumping of dredge materials in the Long Island Sound (I believe they were sent to you by Congressman Zeldin's office). Please find attached an additional 750+ signatures from NY and CT residents.

Thank you,

Jordan Christensen

STOP Dumping Harmful Dredged Material in our Long Island Sound!

I support Citizens Campaign for the Environment (CCE) in its efforts to **protect Long Island Sound (LIS) from the impacts of open water disposal of harmful dredged material.**

The proposed plan by the U.S. Army Corps of Engineers to continue to allow open water disposal of harmful dredged material in LIS is contrary to an agreement by NY and CT to phase out open water dumping, and will adversely impact the health of LIS. I urge the Army Corps to issue a revised plan that:

- Reduces and phases out open water disposal of dredged materials in Long Island Sound;
- Reuses dredged material in a safe and beneficial way.

STOP Dumping Harmful Dredged Material in our Long Island Sound!

I support Citizens Campaign for the Environment (CCE) in its efforts to **protect Long Island Sound (LIS) from the impacts of open water disposal of harmful dredged material.**

The proposed plan by the U.S. Army Corps of Engineers to continue to allow open water disposal of harmful dredged material in LIS is contrary to an agreement by NY and CT to phase out open water dumping, and will adversely impact the health of LIS. I urge the Army Corps to issue a revised plan that:

- Reduces and phases out open water disposal of dredged materials in Long Island Sound;
- Reuses dredged material in a safe and beneficial way.

STOP Dumping Harmful Dredged Material in our Long Island Sound!

I support Citizens Campaign for the Environment (CCE) in its efforts to protect Long Island Sound (LIS) from the impacts of open water disposal of harmful dredged material.

The proposed plan by the U.S. Army Corps of Engineers to continue to allow open water disposal of harmful dredged material in LIS is contrary to an agreement by NY and CT to phase out open water dumping, and will adversely impact the health of LIS. I urge the Army Corps to issue a revised plan that:

- Reduces and phases out open water disposal of dredged materials in Long Island Sound;
- Reuses dredged material in a safe and beneficial way.

STOP Dumping Harmful Dredged Material in our Long Island Sound!

I support Citizens Campaign for the Environment (CCE) in its efforts to **protect Long Island Sound (LIS) from the impacts of open water disposal of harmful dredged material.**

The proposed plan by the U.S. Army Corps of Engineers to continue to allow open water disposal of harmful dredged material in LIS is contrary to an agreement by NY and CT to phase out open water dumping, and will adversely impact the health of LIS. I urge the Army Corps to issue a revised plan that:

- Reduces and phases out open water disposal of dredged materials in Long Island Sound;
- Reuses dredged material in a safe and beneficial way.

STOP Dumping Harmful Dredged Material in our Long Island Sound!

I support Citizens Campaign for the Environment (CCE) in its efforts to protect Long Island Sound (LIS) from the impacts of open water disposal of harmful dredged material.

The proposed plan by the U.S. Army Corps of Engineers to continue to allow open water disposal of harmful dredged material in LIS is contrary to an agreement by NY and CT to phase out open water dumping, and will adversely impact the health of LIS. I urge the Army Corps to issue a revised plan that:

- Reduces and phases out open water disposal of dredged materials in Long Island Sound;
- Reuses dredged material in a safe and beneficial way.

STOP Dumping Harmful Dredged Material in our Long Island Sound!

I support Citizens Campaign for the Environment (CCE) in its efforts to protect Long Island Sound (LIS) from the impacts of open water disposal of harmful dredged material.

The proposed plan by the U.S. Army Corps of Engineers to continue to allow open water disposal of harmful dredged material in LIS is contrary to an agreement by NY and CT to phase out open water dumping, and will adversely impact the health of LIS. I urge the Army Corps to issue a revised plan that:

- Reduces and phases out open water disposal of dredged materials in Long Island Sound;
- Reuses dredged material in a safe and beneficial way.

FILL IN DATE MAILED : October 15 2015

TO: U.S. Army Corps of Engineers, New England District,

Attn: Meghan Quinn, Project Manager, (978-318-8179)

696 Virginia Rd., Concord, MA 01742.

I/WE oppose any contaminated material currently in Bridgeport Harbor being moved to the New Haven Harbor, Morris Cove Borrow Pit any time in the future

This environmental waste from the last 100 years, according to the Army Corps' 1998 Draft Environmental Assessment, contains **arsenic, cadmium, chromium, copper, lead, mercury, nickel, zinc, poly nuclear aromatic hydrocarbons (PAHs), and polychlorinated biphenyl (PCB) congeners.** Unsuitable for open water disposal. This dredge material will not be good for swimming, fishing, spawning winter flounder, impacts to leased shellfish beds, shell fishing, and may contaminate the as heavy metals settle into the ground.

(SOURCE) --<https://www.cga.ct.gov/2010/rpt/2010-R-0417.htm>

There should be no added toxic carcinogenic sludge in Morris Cove, a part of New Haven's outer harbor area. The cove's shoreline has parks, historic sites, and residential buildings. In the 1950s, about 1 million cubic yards of fill was removed from Morris Cove to construct Interstate 95, creating a "borrow pit" on the harbor floor. The pit is about 650 feet wide, 2,450 feet long, and 30 feet deep. The cost to contain this waste in Bridgeport is (\$49.7M), which is \$7.6M more than dumping in New Haven (\$42.1M) which is why this is a problem for New Haven Shoreline.... Now.

Options to Morris Cove

Option 1- Southeast CAD Cell. Is located just north of the east breakwater, bounded by the 35 foot entrance channel and has the capacity to store a majority of the unsuitable dredged material. In addition, no shellfish beds would be disturbed during construction. This SE CAD cell was retained as a proposed disposal alternative for unsuitable material, although the West CAD Cell (18 acres) is carried forward as an option in case the Morris Cove borrow pit is not supported as a disposal alternative (Pg.13).

Option 2- Investigation (pg.9) identified two areas as potential Confined Disposal Facility (CDF) locations in Bridgeport, the Powerhouse Creek canal and the upstream portion of Yellow Mill Creek.

Option 3- There are two specific technologies that seem promising to treat the dredged material that will allow it to be used in a beneficial manner. One process involves thermal treatment of dredged material where the resulting end product can be mixed with Portland cement. This "blended cement" can be used in construction. (pg.15)

Option 4- Another process washes the material under pressure and adds surfactants to clean the material. The end result of this process is a soil that can be mixed or amended with other material that can be used in landscaping (pg.15)

We object to ANY material being moved out of Bridgeport Harbor unless it is removed from Long Island Sound, The money saved and potential damage relative to Federal Resources are not acceptable.

(over)

for your time and concern. Please copy and distribute this letter, or dispose of properly. I can be at my office at (203) 654-2905 in North Haven, CT.....Sincerely, David Carr.....

September 20, 2015 (CT) --My name is David Carr, as a Licensed REALTOR and resident, I am honored to be standing up for the future environmental health and economic development of my community. Please invest time to read this now.

Up to 1,108,200 cubic yards of contaminated material currently in Bridgeport Harbor is heading for the New Haven area shoreline if people do not pay attention. This environmental waste, according to the Army Corps' 1998 Draft Environmental Assessment, contains arsenic, cadmium, chromium, copper, lead, mercury, nickel, zinc, poly nuclear aromatic hydrocarbons (PAHs), and polychlorinated biphenyl (PCB) congeners. Unsuitable for open water disposal. This dredge material will not be good for swimming, fishing, spawning winter flounder, impacts to leased shellfish beds, shell fishing, and may contaminate the drinking water as heavy metals settle into the ground. Dredged material will be released from a barge through, the water to land on the bottom. **I oppose the relocation of this material out of Bridgeport Harbor unless it is completely removed from Long Island Sound.**

A standard, tractor trailer size (40x12x8.5 feet) shipping container holds about 84 CubicYards, so we are talking about 13,192 containers of contaminated waste dumped around Morris Cove in New Haven, Long Island Sound, Connecticut.

There should be no added toxic carcinogenic sludge in Morris Cove, a part of New Haven's outer harbor area. The cove's shoreline has parks, historic sites, and residential buildings. In the 1950s, about 1 million cubic yards of fill was removed from Morris Cove to construct Interstate 95, creating a "borrow pit" on the harbor floor. The pit is about 650 feet wide, 2,450 feet long, and 30 feet deep. The cost to contain this waste in Bridgeport is (\$49.7M), which is \$7.6M more than dumping in New Haven (\$42.1M) which is why this is a problem for New Haven Shoreline, right Now.

SOURCE here : <https://www.cga.ct.gov/2010/rpt/2010-R-0417.htm>

2010 Draft Environmental Assessment, Evaluation for Maintenance Dredging and Dredged Material Disposal Facility Construction states 1,199,000 unsuitable cubic yards of dredge material needs to be disposed of (pg 17).

----- **Options to Morris Cove** -----

Option 1- Southeast CAD Cell. Is located just north of the east breakwater, bounded by the 35 foot entrance channel and has the capacity to store a majority of the unsuitable dredged material. In addition, no shellfish beds would be disturbed during construction. This SE CAD cell was retained as a proposed disposal alternative for unsuitable material, although the West CAD Cell (18 acres) is carried forward as an option in case the Morris Cove borrow pit is not supported as a disposal alternative (Pg.13).

Option 2- Investigation (pg.9) identified two areas as potential Confined Disposal Facility (CDF) locations in Bridgeport, the Powerhouse Creek canal and the upstream portion of Yellow Mill Creek.

Option 3- There are two specific technologies that seem promising to treat the dredged material that will allow it to be used in a beneficial manner. One process involves thermal treatment of dredged material where the resulting end product can be mixed with Portland cement. This "blended cement" can be used in construction. (pg.15)

Option 4- Another process washes the material under pressure and adds surfactants to clean the material. The end result of this process is a soil that can be mixed or amended with other material that can be used in landscaping (pg.15)

----- **CONTAMINATED MATERIAL** -----

Samples were collected in 1998 and analyzed for total organic carbon (TOC), metals (arsenic, cadmium, chromium, copper, lead, mercury, nickel, and zinc), poly nuclear aromatic hydrocarbons (PAHs), pesticides, and polychlorinated biphenyl (PCB) congeners. Subsamples of C, F, and K, and CLIS were also analyzed for dioxin/furans (pg.23). The results (pg.26) show PCBs, from double to triple the reference sample, up to over 100 times baseline (498 ug/kb) in first 39 inches of sample. The test sample from the entrance channel "NQ", **determined unusual variability among the five replicates** warranted additional testing of that specific sample (pg.27).

Dear Meghan Quinn,

Reach Out America is a grassroots progressive nonprofit. We advocate for the first amendment, the environment, the social safety net, voting rights and world peace.

Attached is a petition of signatures from many of our members to add to the open comment AGAINST the continued dredging and dumping of toxic materials into our beloved Long Island Sound.

If you have any questions, please don't hesitate to call me.
Thank you for adding our voices.

Sincerely,
Patricia Katz
Green Committee Chair
917-670-2917

Reach Out America, P.O. Box 222057 New York, 11022 ★ www.reachout-america.com ★ 516-487-8782

We, the undersigned, your constituents, strongly reject the continued dumping of toxic wastes into the Long Island Sound. The Sound is a vital source for seafood, tourism and recreation in New York.

A new federal plan would allow the continued dumping of 50 million cubic yards of toxic dredged materials over the next 30 years from Connecticut into the Sound. This is not acceptable.

We cherish our beautiful beaches and waterways and an alternative must be found to protect them now and for generations to come. Examples of how dredged material has been recycled in the past include the restoration of the tidal wetlands in Jamaica Bay, for golf courses and cap landfills such as the Fresh Kills Park in Staten Island. Toxic materials can, and should be treated and put in hazardous waste landfill.

We urge you to reconsider this ill-conceived plan and replace it with a more forward-thinking, environmentally sound one.

The Long Island Sound is an estuary of national significance, with millions of people living in and around its watershed. It is unacceptable to allow the continued dumping of contaminated dredged material in this important water body.

In 2005, the EPA and Army Corps of Engineers agreed to phase out dredge dumping and to implement a Dredge Material Management Plan (DMMP) focusing on beneficial reuse and sustainable solutions. This agreement was supported by the public and was a critical step toward protecting our beloved waterway. However, the draft DMMP fails to deliver on that promise and instead allows for another 30 years of dirty dredge dumping.

I oppose the continued dumping of contaminated materials in the Long Island Sound and urge the Army Corps of Engineers to honor the original agreement and focus on beneficial reuse options as an alternative.

This DMMP took ten years to complete and, with the supporting documents, totals over 1,000 pages. Yet, the draft was only released one week before the public hearings, and we were given a comment period of less than 2 months. The Long Island Sound is a public asset, and we deserve adequate time to read through this document and give substantive feedback. I urge the Army Corps of Engineers to extend the comment period to 120 days and host additional public hearings in October.

The Long Island Sound is an estuary of national significance, with millions of people living in and around its watershed. It is unacceptable to allow the continued dumping of contaminated dredged material in this important water body.

In my city of Norwalk, CT, , we depend upon a clean LI sound to work in harmony with our multimillion dollar shellfish industry.

In 2005, the EPA and Army Corps of Engineers agreed to phase out dredge dumping and to implement a Dredge Material Management Plan (DMMP) focusing on beneficial reuse and sustainable solutions. This agreement was supported by the public and was a critical step toward protecting our beloved waterway. However, the draft DMMP fails to deliver on that promise and instead allows for another 30 years of dirty dredge dumping.

I oppose the continued dumping of contaminated materials in the Long Island Sound and urge the Army Corps of Engineers to honor the original agreement and focus on beneficial reuse options as an alternative. In 2015, we should be able to innovate to reuse and seek safe landward disposal options.

Out of sight , out of mind mentality in USA must stop.

This DMMP took ten years to complete and, with the supporting documents, totals over 1,000 pages. Yet, the draft was only released one week before the public hearings, and we were given a comment period of less than 2 months. The Long Island Sound is a public asset, and we deserve adequate time to read through this document and give substantive feedback. The Long Island Sound is an estuary of national significance, with millions of people living in and around its watershed. It is unacceptable to allow the continued dumping of contaminated dredged material in this important water body.

In 2005, the EPA and Army Corps of Engineers agreed to phase out dredge dumping and to implement a Dredge Material Management Plan (DMMP) focusing on beneficial reuse and sustainable solutions. This agreement was supported by the public and was a critical step toward protecting our beloved waterway. However, the draft DMMP fails to deliver on that promise and instead allows for another 30 years of dirty dredge dumping.

I oppose the continued dumping of contaminated materials in the Long Island Sound and urge the Army Corps of Engineers to honor the original agreement and focus on beneficial reuse options as an alternative.

This DMMP took ten years to complete and, with the supporting documents, totals over 1,000 pages. Yet, the draft was only released one week before the public hearings, and we were given a comment period of less than 2 months. The Long Island Sound is a public asset, and we deserve adequate time to read through this document and give substantive feedback. I urge the Army Corps of Engineers to extend the comment period to 120 days and host additional public hearings in October.

The Long Island Sound is an estuary of national significance, with millions of people living in and around its watershed. It is unacceptable to allow the continued dumping of contaminated dredged material in this important water body.

In 2005, the EPA and Army Corps of Engineers agreed to phase out dredge dumping and to implement a Dredge Material Management Plan (DMMP) focusing on beneficial reuse and sustainable solutions. This agreement was supported by the public and was a critical step toward protecting our beloved waterway. However, the draft DMMP fails to deliver on that promise and instead allows for another 30 years of dirty dredge dumping.

I oppose the continued dumping of contaminated materials in the Long Island Sound and urge the Army Corps of Engineers to honor the original agreement and focus on beneficial reuse options as an alternative.

This DMMP took ten years to complete and, with the supporting documents, totals over 1,000 pages. Yet, the draft was only released one week before the public hearings, and we were given a comment period of less than 2 months. The Long Island Sound is a public asset, and we deserve adequate time to read through this document and give substantive feedback. I urge the Army Corps of Engineers to extend the comment period to 120 days and host additional public hearings in October.

The Long Island Sound is an estuary of national significance, with millions of people living in and around its watershed. It is unacceptable to allow the continued dumping of contaminated dredged material in this important water body.

In 2005, the EPA and Army Corps of Engineers agreed to phase out dredge dumping and to implement a Dredge Material Management Plan (DMMP) focusing on beneficial reuse and sustainable solutions. This agreement was supported by the public and was a critical step toward protecting our beloved waterway. However, the draft DMMP fails to deliver on that promise and instead allows for another 30 years of dirty dredge dumping.

I oppose the continued dumping of contaminated materials in the Long Island Sound and urge the Army Corps of Engineers to honor the original agreement and focus on beneficial reuse options as an alternative.

This DMMP took ten years to complete and, with the supporting documents, totals over 1,000 pages. Yet, the draft was only released one week before the public hearings, and we were given a comment period of less than 2 months. The Long Island Sound is a public asset, and we deserve adequate time to read through this document and give substantive feedback. I urge the Army Corps of Engineers to extend the comment period to 120 days and host additional public hearings in October.

The Long Island Sound is an estuary of national significance, with millions of people living in and around its watershed. It is unacceptable to allow the continued dumping of contaminated dredged material in this important water body.

In 2005, the EPA and Army Corps of Engineers agreed to phase out dredge dumping and to implement a Dredge Material Management Plan (DMMP) focusing on beneficial reuse and sustainable solutions. This agreement was supported by the public and was a critical step toward protecting our beloved waterway. However, the draft DMMP fails to deliver on that promise and instead allows for another 30 years of dirty dredge dumping.

I oppose the continued dumping of contaminated materials in the Long Island Sound and urge the Army Corps of Engineers to honor the original agreement and focus on beneficial reuse options as an alternative.

This DMMP took ten years to complete and, with the supporting documents, totals over 1,000 pages. Yet, the draft was only released one week before the public hearings, and we were given a comment period of less than 2 months. The Long Island Sound is a public asset, and we deserve adequate time to read through this document and give substantive feedback. I urge the Army Corps of Engineers to extend the comment period to 120 days and host additional public hearings in October. Deborah Blackman 99 Long Neck Pt Rd

This DMMP took ten years to complete and, with the supporting documents, totals over 1,000 pages. Yet, the draft was only released one week before the initial public hearings, and we were given a comment period of less than 2 months. The Long Island Sound is a public asset, and we deserve adequate time to read through this document and give substantive feedback. I urge the Army Corps of Engineers to extend the comment period to 120 days.

The Long Island Sound is an estuary of national significance, with millions of people living in and around its watershed. It is unacceptable to allow the continued dumping of contaminated dredged material in this important water body.

In 2005, New York and Connecticut agreed to phase out dredge dumping and requested that the Army Corps develop a Dredge Material Management Plan (DMMP) focusing on beneficial reuse and sustainable solutions. This agreement was supported by the public and was a critical step toward protecting our beloved waterway. However, the draft DMMP fails to deliver on that promise and instead allows for another 30 years of dirty dredge dumping.

I oppose the continued dumping of contaminated materials in the Long Island Sound and urge the Army Corps of Engineers to honor the original agreement and focus on beneficial reuse options as an alternative.

This DMMP took ten years to complete and, with the supporting documents, totals over 1,000 pages. Yet, the draft was only released one week before the initial public hearings, and we were given a comment period of less than 2 months. I oppose the continued dumping of contaminated materials in the Long Island Sound and urge the Army Corps of Engineers to honor the original agreement and focus on beneficial reuse options as an alternative.

This DMMP took ten years to complete and, with the supporting documents, totals over 1,000 pages. Yet, the draft was only released one week before the initial public hearings, and we were given a comment period of less than 2 months. The Long Island Sound is a public asset, and we deserve adequate time to read through this document and give substantive feedback. I urge the Army Corps of Engineers to extend the comment period to 120 days.

The Long Island Sound is an estuary of national significance, with millions of people living in and around its watershed. It is unacceptable to allow the continued dumping of contaminated dredged material in this important water body.

In 2005, New York and Connecticut agreed to phase out dredge dumping and requested that the Army Corps develop a Dredge Material Management Plan (DMMP) focusing on beneficial reuse and sustainable solutions. This agreement was supported by the public and was a critical step toward protecting our beloved waterway. However, the draft DMMP fails to deliver on that promise and instead allows for another 30 years of dirty dredge dumping.

I oppose the continued dumping of contaminated materials in the Long Island Sound and urge the Army Corps of Engineers to honor the original agreement and focus on beneficial reuse options as an alternative.

This DMMP took ten years to complete and, with the supporting documents, totals over 1,000 pages. This DMMP took ten years to complete and, with the supporting documents, totals over 1,000 pages. Yet, the draft was only released one week before the initial public hearings, and we were given a comment period of less than 2 months. The Long Island Sound is a public asset, and we deserve adequate time to read through this document and give substantive feedback. I urge the Army Corps of Engineers to extend the comment period to 120 days.

The Long Island Sound is an estuary of national significance, with millions of people living in and around its watershed. It is unacceptable to allow the continued dumping of contaminated dredged material in this important water body.

In 2005, New York and Connecticut agreed to phase out dredge dumping and requested that the Army Corps develop a Dredge Material Management Plan (DMMP) focusing on beneficial reuse and sustainable solutions. This agreement was supported by the public and was a critical step toward protecting our beloved waterway. However, the draft DMMP fails to deliver on that promise and instead allows for another 30 years of dirty dredge dumping.

I oppose the continued dumping of contaminated materials in the Long Island Sound and urge the Army Corps of Engineers to honor the original agreement and focus on beneficial reuse options as an alternative.

This DMMP took ten years to complete and, with the supporting documents, totals over 1,000 pages. Yet, the draft was only released one week before the initial public hearings, and we were given a comment period of less than 2 months. The Long Island Sound is a public asset, and we deserve adequate time to read through this document and give substantive feedback. According to the US Coast Guard (another government branch) nothing is to go into Long Island Sound. However you want to word it, it is polluted. People should be prohibited from swimming or fishing in the already toxic waste.

The Long Island Sound is an estuary of national significance, with millions of people living in and around its watershed. It is unacceptable to allow the continued dumping of contaminated dredged material in this important water body.

In 2005, New York and Connecticut agreed to phase out dredge dumping and requested that the Army Corps develop a Dredge Material Management Plan (DMMP) focusing on beneficial reuse and sustainable solutions. This agreement was supported by the public and was a critical step toward protecting our beloved waterway. However, the draft DMMP fails to deliver on that promise and instead allows for another 30 years of dirty dredge dumping.

Here's some math and common sense.

This kind of disregard for aquatic and human life is exactly why we need politicians out of government. People know the US government lies, and therefore, you have to lie as well. And a good example of the Armt Corp not doing their job is the tragedy of Louisiana. The levy could have been fixed decades ago for \$1Million. But it was considered too expensive. Then the levy broke and it cost the government BILLIONS. What does the Army corp think would have been a smarter financial decision?

I oppose the continued dumping of contaminated materials in the Long Island Sound and urge the Army Corps of Engineers to honor the original agreement and focus on beneficial reuse options as an alternative.

This DMMP took ten years to complete and, with the supporting documents, totals over 1,000 pages. The Long Island Sound is an estuary of national significance, with millions of people living in and around its watershed. It is unacceptable to allow the continued dumping of contaminated dredged material in this important water body.

In 2005, New York and Connecticut agreed to phase out dredge dumping and requested that the Army Corps develop a Dredge Material Management Plan (DMMP) focusing on beneficial reuse and sustainable solutions. This agreement was supported by the public and was a critical step toward protecting our beloved waterway. However, the draft DMMP fails to deliver on that promise and instead allows for another 30 years of dirty dredge dumping.

I oppose the continued dumping of contaminated materials in the Long Island Sound and urge the Army Corps of Engineers to honor the original agreement and focus on beneficial reuse options as an alternative.

This DMMP took ten years to complete and, with the supporting documents, totals over 1,000 pages. Yet, the draft was only released one week before the initial public hearings, and we were given a comment period of less than 2 months. The Long Island Sound is a public asset, and we deserve adequate time to read through this document and give substantive feedback. I urge the Army Corps of Engineers to extend the comment period to 120 days.
